EVENT NAME AND OBJECT

In JavaScript, the **event name** is a string that identifies the type of action or occurrence (e.g., `'click'`, `'keydown'`, `'load'`), and the **event object** is an object automatically passed to the event handler function that contains detailed information about the event that occurred.

INPUT:

```html
<!DOCTYPE html>
<html>
<head>
    <title>JavaScript Events Example</title>
</head>
<body>

    <h1>JavaScript Event Example</h1>

    <!-- Button Click Event -->
    <button id="myButton">Click Me</button>

    <br><br>

    <!-- Input Keyboard Event -->
    <input type="text" id="myInput" placeholder="Type something">

    <br><br>

    <!-- Form Submit Event -->
    <form id="myForm">
        <input type="text" placeholder="Enter name">
        <button type="submit">Submit</button>
    </form>

    <script>

        // ==============================
        // 1 Click Event
        // ==============================
        var button = document.getElementById("myButton");

        button.addEventListener("click", function(event) {
```

```
            console.log("Event Name:", event.type);          // click
            console.log("Target Element:", event.target);   // button
            console.log("Mouse X:", event.clientX);         // mouse position
            console.log("Mouse Y:", event.clientY);

            alert("Button Clicked!");
        });

        // ==============================
        // 2 Keyboard Event
        // ==============================
        var input = document.getElementById("myInput");

        input.addEventListener("keydown", function(event) {

            console.log("Event Name:", event.type);  // keydown
            console.log("Key Pressed:", event.key);  // pressed key

        });

        // ==============================
        // 3 Form Submit Event
        // ==============================
        var form = document.getElementById("myForm");

        form.addEventListener("submit", function(event) {

            event.preventDefault();  // stop page reload

            console.log("Form Submitted");
            console.log("Event Name:", event.type);

        });

    </script>

</body>
</html>
```
